Senior School Certificate Examination

Marking Scheme - Physics (Code 55/1, Code 55/2, Code 55/3)

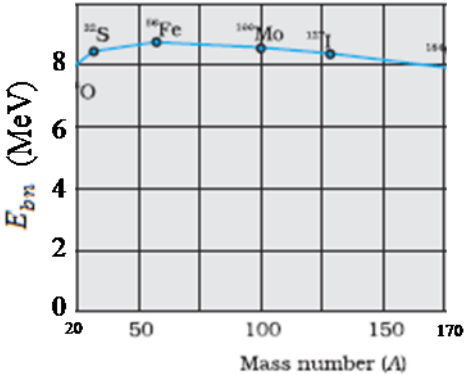

1. The marking scheme provides general guidelines to reduce subjectivity in the marking. The answers given in the marking scheme are suggested answers. The content is thus indicated. If a student has given any other answer, which is different from the one given in the marking scheme, but conveys the meaning correctly, such answers should be given full weightage.
2. In value based questions, any other individual response with suitable justification should also be accepted even if there is no reference to the text.
3. Evaluation is to be done as per instructions provided in the marking scheme. It should not be done according to one's own interpretation or any other consideration. Marking scheme should be adhered to and religiously followed.
4. If a question has parts, please award in the right hand side for each part. Marks awarded for different part of the question should then be totaled up and written in the left hand margin and circled.
5. If a question does not have any parts, marks are to be awarded in the left hand margin only.
6. If a candidate has attempted an extra question, marks obtained in the question attempted first should be retained and the other answer should be scored out.
7. No marks are to be deducted for the cumulative effect of an error. The student should be penalized only once.
8. Deduct $\frac{1}{2}$ mark for writing wrong units, missing units, in the final answer to numerical problems.
9. Formula can be taken as implied from the calculations even if not explicitly written.
10. In short answer type question, asking for two features / characteristics / properties if a candidate writes three features, characteristics / properties or more, only the correct two should be evaluated.
11. Full marks should be awarded to a candidate if his / her answer in a numerical problem is close to the value given in the scheme.
12. In compliance to the judgement of the Hon'ble Supreme Court of India, Board has decided to provide photocopy of the answer book(s) to the candidates who will apply for it along with the requisite fee. Therefore, it is all the more important that the evaluation is done strictly as per the value points given in the marking scheme so that the Board could be in a position to defend the evaluation at any forum.
13. The Examiner shall also have to certify in the answer book that they have evaluated the answer book strictly in accordance with the value points given in the marking scheme and correct set of question paper.
14. Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title paper, correctly totaled and written in figures and words.
15. In the past it has been observed that the following are the common types of errors committed by the Examiners
 - Leaving answer or part thereof unassessed in an answer script.
 - Giving more marks for an answer than assigned to it or deviation from the marking scheme.
 - Wrong transference of marks from the inside pages of the answer book to the title page.
 - Wrong question wise totaling on the title page.
 - Wrong totaling of marks of the two columns on the title page.
 - Wrong grand total.
 - Marks in words and figures not tallying.
 - Wrong transference to marks from the answer book to award list.
 - Answer marked as correct (\checkmark) but marks not awarded.
 - Half or part of answer marked correct (\checkmark) and the rest as wrong (\times) but no marks awarded.
16. Any unassessed portion, non carrying over of marks to the title page or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.

MARKING SCHEME

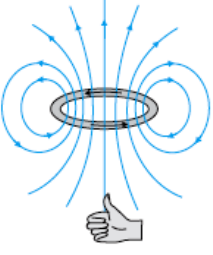

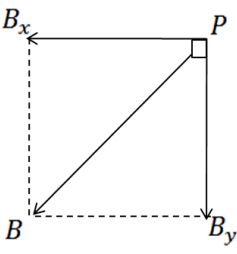

Q. No.	Expected Answer/ Value Points SECTION A	Marks	Total Marks				
Q1		1	1				
Q2	Ratio of amplitude of modulating signal A_m to amplitude of carrier wave A_C Alternatively: $\mu = \frac{A_m}{A_C}$ It is kept less than one to avoid distortion	$\frac{1}{2}$ $\frac{1}{2}$	1				
Q3	Accept both the answers : A : +ve ; B: -ve or A : -ve ; B: +ve	1	1

Q18

Circuit diagram	1
Expression for voltage gain	1
Explanation for 180° phase difference	1

$$A_V = \frac{V_o}{V_i} = \frac{\Delta V_{CE}}{r \Delta I_B} = -\beta_{ac} \frac{R_L}{r}$$

$$V_{CC} = V_{CE} + I_C R_L$$

$$\therefore \Delta V_{CC} = \Delta V_{CE} + R_L \Delta I_C = 0$$

$$\therefore \Delta V_{CE} = -R_L \Delta I_C$$

Hence, change in output is negative when the input signal is +ve.

This shows 180° phase difference between input and output signal.

If $n_1 > n_2$ $\frac{n_2 - n_1}{n_1}$ becomes negative $\therefore P = \frac{1}{f}$ becomes positive <i>or lens become converging</i></p> <p>ii. $(n_2)_{violet} > (n_2)_{red}$ \thereforePower increases on changing to violet light</p> <p>b) Rays on L_3 be incident parallel to the principal axis image from L_1 is formed at focus of L_2 and focus of L_2 is $2f_1$ from 'O' of L_1</p> <p>$\therefore L_1 L_2 = 2f_1 + f_2 = (3 \times 30)\text{cm} = 90\text{cm}$ $L_2 L_3$ can be any distance</p> <p style="text-align: center;">OR</p> <div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;"> <p>a) Derivation of expression for refractive index 2</p> <p style="padding-left: 20px;">Graph 1</p> <p>b) Numerical 2</p> </div> <p>a)</p> <div style="text-align: center;">  </div> <p>$\angle A + \angle QNR = 180^\circ$ $r_1 + r_2 + \angle QNR = 180^\circ$ $\therefore r_1 + r_2 = \angle A$</p>	<p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1/2</p> <p>1/2</p>	<p>5</p>

$$\delta = (i - r_1) + (e - r_2)$$

$$\delta = i + e - A$$

For minimum derivation,

$$\delta = D_m, i = e \text{ and } r_1 = r_2$$

$$\therefore 2r = A \Rightarrow r = \frac{A}{2}$$

$$D_m = 2i - A \Rightarrow i = \frac{A + D_m}{2}$$

$$\therefore n = \frac{n_2}{n_1} = \frac{\sin i}{\sin r}$$

$$= \frac{\sin\left(\frac{A + D_m}{2}\right)}{\sin \frac{A}{2}}$$

b)

$$\sin c = \frac{1}{n} = \frac{1}{\sqrt{2}}$$

$$\Rightarrow c = 45^\circ$$

$$r + c = 60^\circ \Rightarrow r = 15^\circ$$

$$n = \frac{\sin i}{\sin r}$$

$$\Rightarrow \sqrt{2} = \frac{\sin i}{\sin 15^\circ}$$

$$\Rightarrow i = \sin^{-1}[\sqrt{2} \sin 15^\circ]$$

OR

Circuit of full wave rectifier	1
Working Principle	1
Input and output waveforms	1

Circuit diagram; input and output waveforms;

Working Principle:

When A is +ve, B is negative

Only D_1 conducts because it is forward biased Current in R_L flows from X to Y

When B is positive and A is negative, only D_2 conducts and Current in R_L is once again from X to Y.

SECTION E

Q24	a) Average Power dissipation is zero	2			
	b) Numerical	3			
	a) Instantaneous Power = $vi = V_o \sin wt I_o \cos wt$ Average power, $P = \frac{1}{T} \int_0^T vidt$		$\frac{1}{2}$		
	$= \frac{V_o I_o}{2T} \int_0^T 2 \sin wt \cos wt dt$		$\frac{1}{2}$		
	$= \frac{V_o I_o}{2T} \int_0^T \sin 2wt dt$		$\frac{1}{2}$		
	$= 0$		$\frac{1}{2}$		
	b) i. $\omega_o = \frac{1}{\sqrt{LC}}$		$\frac{1}{2}$		
	$= \frac{1}{(200 \times 10^{-3} \times 400 \times 10^{-6})^{\frac{1}{2}}}$				
	$= \frac{1}{\sqrt{8 \times 10^{-5}}} s^{-1} = \frac{10^3}{\sqrt{80}} s^{-1} \approx 111s^{-1}$		$\frac{1}{2}$		
	$I = \frac{V}{R} = \frac{50}{10} = 5 A$		1		
ii. $Q = \frac{1}{R} \sqrt{\frac{L}{C}} = \frac{1}{10} \sqrt{\frac{200 \times 10^{-3}}{400 \times 10^{-6}}} = \sqrt{5}$		1		5	
	OR				
	a) Derivation of induced emf	2 ½			
	b) Numerical	2 ½			
a)			$\frac{1}{2}$		

	$\phi_B = Blx$ $\varepsilon = \frac{-d\phi_B}{dt}$ $= -Bl \frac{dx}{dt}$ $= Blv$ <p>b) $\omega = 360 \times \frac{2\pi}{60} = 12\pi$</p> $\varepsilon = \frac{1}{2} B_H l^2 \omega$ $\therefore 400 \times 10^{-3} = \frac{1}{2} \cdot B_H \times (60 \times 10^{-2})^2 \times 12\pi$ $\therefore B_H = \frac{5}{27\pi} = 0.06T$ <p>No change in emf if no. of spokes is increased.</p>	<p>1/2 1/2 1/2 1/2 1/2 1/2 1/2 1/2</p>	<p>5</p>										
<p>Q25</p>	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 5px;">a) Explanation with reason</td> <td style="text-align: right; padding: 5px;">2 1/2</td> </tr> <tr> <td style="padding: 5px;">b) Calculation of separations</td> <td style="text-align: right; padding: 5px;">2 1/2</td> </tr> </table> <p>a) $P = \frac{1}{f} = \left(\frac{n_2 - n_1}{n_2}\right) \left(\frac{1}{R_1} - \frac{1}{R_2}\right)$ $= \left(\frac{n_2 - n_1}{n_2}\right) \left(-\frac{2}{R}\right)$ for diverging lens = negative</p> <p>i. If $n_1 > n_2$ $\frac{n_2 - n_1}{n_1}$ becomes negative $\therefore P = \frac{1}{f}$ becomes positive <i>or lens become converging</i></p> <p>ii. $(n_2)_{violet} > (n_2)_{red}$ \thereforePower increases on changing to violet light</p> <p>b) Rays on L_3 be incident parallel to the principal axis image from L_1 is formed at focus of L_2 and focus of L_2 is $2f_1$ from 'O' of L_1</p> <p>$\therefore L_1 L_2 = 2f_1 + f_2 = (3 \times 30)\text{cm} = 90\text{cm}$ $L_2 L_3$ can be any distance</p> <p style="text-align: center;">OR</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 5px;">a) Derivation of expression for refractive index</td> <td style="text-align: right; padding: 5px;">2</td> </tr> <tr> <td style="padding: 5px;">Graph</td> <td style="text-align: right; padding: 5px;">1</td> </tr> <tr> <td style="padding: 5px;">b) Numerical</td> <td style="text-align: right; padding: 5px;">2</td> </tr> </table> <p>a)</p>	a) Explanation with reason	2 1/2	b) Calculation of separations	2 1/2	a) Derivation of expression for refractive index	2	Graph	1	b) Numerical	2	<p>1/2 1/2 1/2 1/2 1/2 1/2 1/2 1/2 1/2 1/2</p>	<p>5</p>
a) Explanation with reason	2 1/2												
b) Calculation of separations	2 1/2												
a) Derivation of expression for refractive index	2												
Graph	1												
b) Numerical	2												

$$\begin{aligned} \angle A + \angle QNR &= 180^\circ \\ r_1 + r_2 + \angle QNR &= 180^\circ \\ \therefore r_1 + r_2 &= \angle A \\ \delta &= (i - r_1) + (e - r_2) \\ \delta &= i + e - A \end{aligned}$$

For minimum deviation,

$$\delta = D_m, i = e \text{ and } r_1 = r_2$$

$$\therefore 2r = A \Rightarrow r = \frac{A}{2}$$

$$D_m = 2i - A \Rightarrow i = \frac{A + D_m}{2}$$

$$\begin{aligned} \therefore n &= \frac{n_2}{n_1} = \frac{\sin i}{\sin r} \\ &= \frac{\sin\left(\frac{A + D_m}{2}\right)}{\sin\frac{A}{2}} \end{aligned}$$

b)

$$\begin{aligned} \sin c &= \frac{1}{n} = \frac{1}{\sqrt{2}} \\ \Rightarrow c &= 45^\circ \end{aligned}$$

a) Statement of Guass's law	1												
Derivation	2												
b) Electric flux Expression	2												
a) Derivation of expression for electric potential	3												
b) Numerical Problem	2												

$$V = \frac{1}{4\pi \epsilon_0} \left[\frac{q}{r_1} - \frac{q}{r_2} \right]$$

$$r_1^2 = r^2 + a^2 - 2ar \cos \theta \approx r^2 \left(1 - \frac{2a \cos \theta}{r} \right)$$

$$r_2^2 = r^2 + a^2 + 2ar \cos \theta \approx r^2 \left(1 + \frac{2a \cos \theta}{r} \right)$$

If $r \gg a$

$$\frac{1}{r_1} = \frac{1}{r} \left[1 - \frac{2a \cos \theta}{r} \right]^{-\frac{1}{2}} \approx \frac{1}{r} \left[1 + \frac{a}{r} \cos \theta \right]$$

$$\text{and } \frac{1}{r_2} \approx \frac{1}{r} \left[1 - \frac{a}{r} \cos \theta \right]$$

$$\begin{aligned} \therefore V &= \frac{q}{4\pi \epsilon_0} \cdot \frac{2a \cos \theta}{r^2} \\ &= \frac{1}{4\pi \epsilon_0} \frac{p \cos \theta}{r^2} \end{aligned}$$

$$\text{b) } \frac{1}{4\pi \epsilon_0} \frac{4\mu C}{x^2} = \frac{1}{4\pi \epsilon_0} \frac{1\mu C}{(2-x)^2}$$

$$\therefore \frac{x}{2} = 2 - x$$

$$\therefore 3x = 4 \Rightarrow x = \frac{4}{3} m$$

Q22

Circuit diagram	1
Expression for voltage gain	1
Explanation for 180° phase difference	1

$$A_V = \frac{V_o}{V_i} = \frac{\Delta V_{CE}}{r \Delta I_B} = -\beta_{ac} \frac{R_L}{r}$$

$$V_{CC} = V_{CE} + I_C R_L$$

$$\therefore \Delta V_{CC} = \Delta V_{CE} + R_L \Delta I_C = 0$$

$$\therefore \Delta V_{CE} = -R_L \Delta I_C$$

Hence, change in output is negative when the input signal is +ve.

This shows 180° phase difference between input and output signal.

$$\therefore E = \frac{\lambda}{2\pi\epsilon_0 r}$$

b) $dq = \lambda dx = kx dx$

$$Q = \int_0^l dq = \int_0^l kx dx = \frac{1}{2}kl^2$$

$$\therefore \phi = \frac{Q}{\epsilon_0} = \frac{kl^2}{2\epsilon_0}$$

OR

a) Derivation of expression for electric potential	3
b) Numerical Problem	2

a)

$$V = \frac{1}{4\pi\epsilon_0} \left[\frac{q}{r_1} - \frac{q}{r_2} \right]$$

$$r_1^2 = r^2 + a^2 - 2ar \cos \theta \approx r^2 \left(1 - \frac{2a \cos \theta}{r} \right)$$

$$r_2^2 = r^2 + a^2 + 2ar \cos \theta \approx r^2 \left(1 + \frac{2a \cos \theta}{r} \right)$$

If $r \gg a$

$$\frac{1}{r_1} = \frac{1}{r} \left[1 - \frac{2a \cos \theta}{r} \right]^{-\frac{1}{2}} \approx \frac{1}{r} \left[1 + \frac{a}{r} \cos \theta \right]$$

and $\frac{1}{r_2} \approx \frac{1}{r} \left[1 - \frac{a}{r} \cos \theta \right]$

$$\therefore V = \frac{q}{4\pi\epsilon_0} \cdot \frac{2a \cos \theta}{r^2}$$

$$= \frac{1}{4\pi\epsilon_0} \frac{p \cos \theta}{r^2}$$

b) $\frac{1}{4\pi\epsilon_0} \frac{4\mu C}{x^2} = \frac{1}{4\pi\epsilon_0} \frac{1\mu C}{(2-x)^2}$

$$\therefore \frac{x}{2} = 2 - x$$

$$\therefore 3x = 4 \Rightarrow x = \frac{4}{3}m$$

Q26

a) Explanation with reason	2 ½
b) Calculation of separations	2 ½

a) $P = \frac{1}{f} = \left(\frac{n_2 - n_1}{n_2}\right) \left(\frac{1}{R_1} - \frac{1}{R_2}\right)$
 $= \left(\frac{n_2 - n_1}{n_2}\right) \left(-\frac{2}{R}\right)$ for diverging lens
 $=$ negative

i. If $n_1 > n_2$
 $\frac{n_2 - n_1}{n_1}$ becomes negative
 $\therefore P = \frac{1}{f}$ becomes positive
or lens become converging

ii. $(n_2)_{violet} > (n_2)_{red}$
 \therefore Power increases on changing to violet light
 b) Rays on L_3 be incident parallel to the principal axis
 image from L_1 is formed at focus of L_2
 and focus of L_2 is $2f_1$ from 'O' of L_1

$\therefore L_1L_2 = 2f_1 + f_2 = (3 \times 30)\text{cm} = 90\text{cm}$
 L_2L_3 can be any distance

OR

a) Derivation of expression for refractive index	2
Graph	1
b) Numerical	2

a)

$\angle A + \angle QNR = 180^\circ$
 $r_1 + r_2 + \angle QNR = 180^\circ$
 $\therefore r_1 + r_2 = \angle A$
 $\delta = (i - r_1) + (e - r_2)$
 $\delta = i + e - A$
 For minimum deviation,
 $\delta = D_m, i = e$ and $r_1 = r_2$
 $\therefore 2r = A \Rightarrow r = \frac{A}{2}$
 $D_m = 2i - A \Rightarrow i = \frac{A + D_m}{2}$
